

Sustainability Scan

Profit, People, and Planet Assessment

Executive Summary

This sustainability scan evaluates how an organization performs across the three CSR dimensions: Profit, People, and Planet. The analysis focuses on current practices, stakeholder expectations, operational impact, and realistic opportunities for improvement.

Profit

- Assess whether sustainability supports long-term competitiveness, efficiency, and customer value.
- Review how responsible practices may reduce waste, improve reputation, and support stronger market positioning.
- Identify cost-effective initiatives that can be implemented gradually.

People

- Evaluate employee well-being, diversity, development opportunities, and workplace culture.
- Consider customer trust, community impact, and ethical business practices.
- Recommend clearer communication and stronger stakeholder involvement.

Planet

- Review energy use, waste management, materials, transport, and environmental awareness.
- Identify opportunities for recycling, digitalization, responsible purchasing, and reduced resource consumption.
- Recommend measurable environmental targets.

Key Findings

The organization can strengthen sustainability by translating broad intentions into clear actions, ownership, measurable KPIs, and regular reporting. The strongest improvements are likely to come from small operational changes that are practical, visible, and easy to monitor.

Recommendations

- Create a simple annual CSR action plan.
- Assign responsibility for each initiative.
- Track a small set of KPIs for people, planet, and profit.
- Communicate progress internally and externally.
- Review progress quarterly and update actions based on results.

Conclusion

Sustainability should be treated as an operational and strategic priority rather than a separate activity. A phased approach can improve impact while keeping costs and organizational change manageable.
